**Customer :** Pyrite Chemical Facility in Southeast PA

**Location :** PA

**Specialist :** Mike Reinbold

**System :** Chesterton 1724 cut ring packing set and Rotary Live Load

**Date Installed :** November 9, 2006

**Problem:** The Kynar reactor cycles from ambient to 300 F several times per week. Existing packing was being replaced approximately every four weeks and required frequent interim adjustments.

**Results :** Packing life increased from four weeks to six months and frequent adjustments between repacking were eliminated.
